

# Bounded-Buffer Problem

---

I didn't modify the original file.

## Compile & Run

```
$ gcc buffer.c -o buffer.exe -fopenmp  
$ ./readers.exe
```

## Introduction

We using OpenMP in C that can maintain multithreading.

`#pragma omp parallel sections` is the parallel part and threads will process `producer()` & `consumer()` seperately by `#pragma omp setction`.

Two variable `in` & `out` can make mutex
