Bounded-Buffer Problem

> **I didn't modify the original file.**

Compile & Run

```
$ gcc buffer.c -o buffer.exe -fopenmp
$ ./buffer.exe
```

Introduction

We using OpenMP in C that can maintain multithreading.

`#pragma omp parallel sections` is the parallel part and threads will process `producer()` & `consumer()` seperately by `#pragma omp setction`.
Two variable `in` & `out` can make mutex
